210 Santara SL I.O.

Your first "big" boat? Make it the Santara 210. The last boat you'll ever buy? Entertaining is easy with such features as 10-person capacity, a 48-qt. ice chest, stereo, stainless steel ski pylon and full swim platform. And for a touch of luxury ask for the optional Brougham package a two high back buckets, a full width rear bench seat and sundeck. Great fishing option with fiberglass washdown floor, order the 212 Santara.

QUALITY PRODUCTS BRING PHENOMENAL GROWTH

In 10 years since its founding, 4 Winns has grown to one of the largest manufacturers of boats 26 feet and under.

At our main plant adjacent to our corporate headquarters in Cadillac Michigan, our employees build thousands of boats in a wide variety of sizes and styles. To meet the demand for our popular 23 to 26 ft. boats, 4 Winns has just built a new 64,000 sq. ft. cruiser plant nearby.

And to serve the fast growing Southeast, Southwest and West Coast markets we've added a 126,000 sq. ft. plant in Athens, Texas. This plant is the latest word in modern boat building technology with four production lines each 625 feet long to allow efficient assembly and extra curing time and thus a higher quality product.

4 Winns operates three shifts a day in Cadillac and similar high volume is fast being approached in Texas. This growing demand for our products clearly says that when you buy 4 Winns you buy a winner!

WHERE ENERGY SAVINGS ORIGINATE

Light hulls that are tough mean more speed per horsepower, and that means less fuel and longer hull life. The cutaway below shows how our special combination of hand-layed woven roving and mat fit together. It makes 4-WINNS hull 20% stronger in flexural strength than mat construction. Ordinary, chopped glass hulls don't have the ability to distribute stress over a large area as do continuous strands of woven roving. The chopped glass fractures (because it can't flex like woven roving). Moreover, our hand-lay-up design gives you a lighter hull. It's easier for a smaller car to tow on the road. Less energy is required to push the boat. So you save *three ways*; lower initial cost, less fuel consumption and long hull life.

Also in all 4 Winns boats there is wood reinforcing under the fittings to prevent them from pulling out. The wood floor and stringers are completely encased in fiberglass for strength and permanence. Rigid cell, urethane foam fills all spaces between stringers and floors fusing the hull bottom and sides to the stringers and flooring. This, combined with the hand-layed woven roving and mat hulls, gives you a 4 Winns boat built to last and last and last.

All Four Winns boats are designed and manufactured in accordance with recommendations and guidelines of the National Marine Manufacturers Association (NNMA), the U.S. Coast Guard and the American Boat and Yacht Council (ABYC) and are covered by a limited one-year warranty available for review at any Four Winns dealership.

Information in this catalog is based upon the latest product specifications available as of 8-8-85. Some photos may show optional equipment. Your Four Winns dealer has the latest information on equipment and prices.

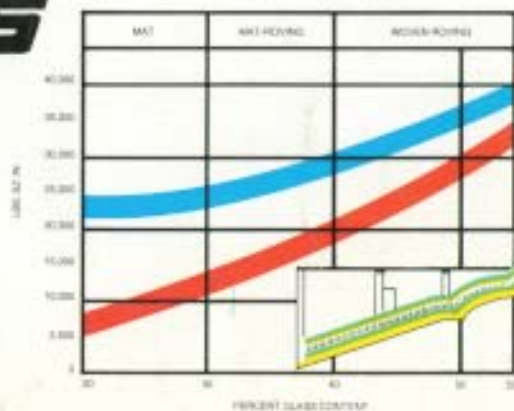

Because of our commitment to continuous product improvement, Four Winns reserves the right to make changes at any time, without notice, in the colors, equipment, specifications, materials and price of any model, or to discontinue models. Should changes in production models be made, Four Winns is not obligated to make similar changes or modifications to models sold prior to the date of such changes.
